REC_2028_OOPS using Java_Week 6_MCQ

Attempt : 1
Total Mark : 15
Marks Obtained : 12

Section 1 : MCQ

1. What will be the output of the following program?

```
class A {  
    public int i;  
    private int j;  
}  
class B extends A {  
    void display() {  
        super.j = super.i + 1;  
        System.out.println(super.i + " " + super.j);  
    }  
}  
class inheritance {  
    public static void main(String args[]) {  
        B obj = new B();  
        obj.i=1;
```

```
        obj.j=2;  
        obj.display();  
    }  
}
```

Answer

2 3

Status : Wrong

Marks : 0/1

2. What will be the output of the following Java program?

```
class Test {  
    void show(int a) {  
        System.out.println("Integer method");  
    }  
    void show(String s) {  
        System.out.println("String method");  
    }  
    public static void main(String[] args) {  
        Test obj = new Test();  
        obj.show(null);  
    }  
}
```

Answer

String method

Status : Correct

Marks : 1/1

3. What will be the output of the following code?

```
class A {  
    void display() {  
        System.out.println("Display A");  
    }  
}  
  
class B extends A {
```

```
void display() {  
    System.out.println("Display B");  
}  
  
}  
  
class C extends B {  
    void display() {  
        super.display();  
    }  
}  
  
class Test {  
    public static void main(String[] args) {  
        C obj = new C();  
        obj.display();  
    }  
}
```

Answer

Display B

Status : Correct

Marks : 1/1

4. What will be the output of the following code?

```
class A {  
    int sum(int x) {  
        return x + 2;  
    }  
}  
  
class B extends A {  
    int sum(int x) {  
        return super.sum(x) * 2;  
    }  
}  
  
class C extends B {  
    int sum(int x) {
```

```
        return super.sum(x) - 3;
    }
}

class Test {
    public static void main(String[] args) {
        C obj = new C();
        System.out.println(obj.sum(4));
    }
}
```

Answer

9

Status : Correct

Marks : 1/1

5. Which of the following is the correct way for class B to inherit from class A?

Answer

```
class B extends A {}
```

Status : Correct

Marks : 1/1

6. What will be the output of the following Java program?

```
class A {
    void display() {
        System.out.println("Class A");
    }
}
```

```
class B extends A {
    void show() {
        System.out.println("Class B");
    }
}
```

```
241501011 class C extends B {  
241501011     void print() {  
241501011         System.out.println("Class C");  
241501011     }  
241501011 }  
241501011  
241501011 class Test {  
241501011     public static void main(String[] args) {  
241501011         C obj = new C();  
241501011         obj.display();  
241501011         obj.show();  
241501011         obj.print();  
241501011     }  
241501011 }
```

Answer

Class A Class B Class C

Status : Correct

Marks : 1/1

7. What will be the output of the following Java program?

```
241501011 class A {  
241501011     int value = 10;  
241501011     void display() {  
241501011         System.out.println("A's display: " + value);  
241501011     }  
241501011 }  
241501011 class B extends A {  
241501011     int value = 20;  
241501011     void display() {  
241501011         System.out.println("B's display: " + value);  
241501011     }  
241501011 }  
241501011 class Test {  
241501011     public static void main(String[] args) {  
241501011         B obj = new B();  
241501011         obj.display();  
241501011         System.out.println("Value: " + obj.value);  
241501011     }
```

```
    }  
}
```

Answer

B's display: 20 Value: 20

Status : Wrong

Marks : 0/1

8. Which of the following is true about method overriding in Java?

Answer

The method must have the same name and different parameters in both the parent and child class

Status : Wrong

Marks : 0/1

9. Select the correct keyword for implementing inheritance through the class.

Answer

extends

Status : Correct

Marks : 1/1

10. What will be the output of the following Java program?

```
class Test {  
    void display(int a, int b) {  
        System.out.println("Method 1");  
    }  
    void display(double a, double b) {  
        System.out.println("Method 2");  
    }  
    public static void main(String[] args) {  
        Test obj = new Test();  
        obj.display(10, 10.0);  
    }  
}
```

Answer

Method 2

Status : Correct

Marks : 1/1

11. What will be the output of the following program?

```
class A {  
    int x = 10;  
}  
  
class B extends A {  
    int x = 20;  
}  
  
class C extends B {  
    int x = 30;  
  
    void display() {  
        System.out.println(x);  
        System.out.println(super.x);  
    }  
}  
  
class Test {  
    public static void main(String[] args) {  
        C obj = new C();  
        obj.display();  
    }  
}
```

Answer

3020

Status : Correct

Marks : 1/1

12. What will be the output of the following program?

```
class Vehicle {  
    String type = "Vehicle";  
}  
  
class Car extends Vehicle {  
    String type = "Car";  
}  
  
class Test {  
    public static void main(String[] args) {  
        Car c = new Car();  
        System.out.println(c.type);  
    }  
}
```

Answer

Car

Status : Correct

Marks : 1/1

13. What will be the output of the following Java program?

```
class Parent {  
    void show() {  
        System.out.println("Parent class");  
    }  
}  
class Child extends Parent {  
    void show() {  
        System.out.println("Child class");  
    }  
}  
class Test {  
    public static void main(String[] args) {  
        Parent obj = new Child();  
        obj.show();  
    }  
}
```

Answer

Child class

Status : Correct

Marks : 1/1

14. What will be the output of the following Java program?

```
class Vehicle {  
    void startEngine() {  
        System.out.println("Vehicle engine started");  
    }  
}  
  
class Car extends Vehicle {  
    void startEngine() {  
        System.out.println("Car engine started");  
    }  
}  
  
class Main {  
    public static void main(String[] args) {  
        Vehicle myVehicle = new Car();  
        myVehicle.startEngine();  
    }  
}
```

Answer

Car engine started

Status : Correct

Marks : 1/1

15. What will be the output of the following Java program?

```
class Vehicle {  
    void start() {  
        System.out.println("Vehicle starts");  
    }  
}
```

```
class Car extends Vehicle {  
    void start() {  
        System.out.println("Car starts");  
    }  
}  
class ElectricCar extends Car {  
    void start() {  
        System.out.println("Electric Car starts silently");  
    }  
}  
class Test {  
    public static void main(String[] args) {  
        Vehicle v = new ElectricCar();  
        v.start();  
    }  
}
```

Answer

Electric Car starts silently

Status : Correct

1. Problem Statement

Elsa subscribes to a premium service with a base monthly cost, a service tax and an extra feature cost. Assist her in writing an inheritance program that takes input for these values and calculates the total monthly cost.

Refer to the below class diagram:

Input Format

The first line of input consists of a double value, representing the base monthly cost.

The second line consists of a double value, representing the service tax.

The third line consists of a double value, representing the extra feature cost.

Output Format

The output prints "Rs. X" where X is a double value, rounded off to two decimal places.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 10.0

2.5

5.0

Output: Rs. 17.50

Answer

```
import java.util.Scanner;

class Subscription {
    protected double baseMonthlyCost;
    protected double serviceTax;

    public Subscription(double baseMonthlyCost, double serviceTax) {
        this.baseMonthlyCost = baseMonthlyCost;
        this.serviceTax = serviceTax;
    }

    public double calculateMonthlyCost() {
        return baseMonthlyCost + serviceTax;
    }
}
```

```
class PremiumSubscription extends Subscription {
    private double extraFeatureCost;

    public PremiumSubscription(double baseMonthlyCost, double serviceTax,
        double extraFeatureCost) {
        super(baseMonthlyCost, serviceTax);
        this.extraFeatureCost = extraFeatureCost;
    }
}
```

```
@Override  
public double calculateMonthlyCost() {  
    return super.calculateMonthlyCost() + extraFeatureCost;  
}  
}  
  
public class Main {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
  
        double baseMonthlyCost = scanner.nextDouble();  
        double serviceTax = scanner.nextDouble();  
        double extraFeatureCost = scanner.nextDouble();  
  
        PremiumSubscription premiumSubscription = new  
        PremiumSubscription(baseMonthlyCost, serviceTax, extraFeatureCost);  
  
        double totalMonthlyCost = premiumSubscription.calculateMonthlyCost();  
  
        System.out.printf("Rs. %.2f%n", totalMonthlyCost);  
  
        scanner.close();  
    }  
}
```

Section 1 : Coding

1. Problem Statement

Alice is managing an online store and wants to implement a program using inheritance to calculate the selling price of products after applying discounts.

Guide her by following the instructions:

Create a base class called Product with a public double attribute price. Create a subclass called DiscountedProduct, which extends Product and includes a private double attribute discount rate. This subclass has a method called calculateSellingPrice() to determine the final selling price after applying the discount.

Formula: Discounted selling price = price * (1 - discount rate)

Input Format

The first line of input consists of a double value p , the initial price of the product.

The second line consists of a double value d , the discount rate.

Output Format

The output prints "Rs. X", where X is a double value, representing the calculated discounted selling price, rounded off to two decimal places.

If the discount rate is greater than 1, print "Not applicable".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 50.00

0.20

Output: Rs. 40.00

Answer

```
import java.util.Scanner;  
  
class Product {  
    public double price;  
  
    public Product(double price) {  
        this.price = price;  
    }  
  
    class DiscountedProduct extends Product {  
        private double discountRate;  
  
        public DiscountedProduct(double price, double discountRate) {  
            super(price);  
            this.discountRate = discountRate;  
        }  
  
        public double calculateSellingPrice() {  
            if (discountRate > 1) {  
                return price;  
            } else {  
                return price * (1 - discountRate);  
            }  
        }  
    }  
}
```

```
        return -1;
    }
    return price * (1 - discountRate);
}
}

class ProductPricing {
public static void main(String[] args) {
    Scanner scanner = new Scanner(System.in);

    double initialPrice = scanner.nextDouble();
    double discountRate = scanner.nextDouble();
    DiscountedProduct discountedProduct = new
DiscountedProduct(initialPrice, discountRate);
    double sellingPrice = discountedProduct.calculateSellingPrice();

    if (sellingPrice >= 0){
        System.out.printf("Rs. %.2f%n", sellingPrice);
    } else {
        System.out.println("Not applicable");
    }
    scanner.close();
}
}
```

1. Problem Statement

Preethi is working on a project to automate sales tax calculations for items in a store. She wants to create a program that takes the price of an item and the sales tax rate as input and calculates the final price of the item after applying the sales tax.

Write a program using the class SalesTaxCalculator, which contains an overloaded method named calculateFinalPrice to handle both integer and double inputs. The program should also include a Main class that takes user input, calls the appropriate method from SalesTaxCalculator, and prints the final price of the item.

Formula Used: Final price = price + ((price * sales tax rate) / 100)

Input Format

The first line of input consists of an integer price (the price of the item for integer inputs).

The second line of input consists of an integer taxRate (the sales tax rate for integer inputs).

The third line of input consists of a double price (the price of the item for double inputs).

The fourth line of input consists of a double taxRate (the sales tax rate for double inputs).

Output Format

The first line of output prints an integer, representing the final price of the item after applying the sales tax for integer inputs (a and b).

The second line prints a double value, representing the final price of the item after applying the sales tax for double-value inputs (m and n), rounded to two decimal places.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 100

10

100.0

5.0

Output: 110

105.00

Answer

```
import java.util.Scanner;  
class SalesTaxCalculator {  
  
    public static int calculateFinalPrice(int price, int taxRate) {  
        return price + (price * taxRate) / 100;  
    }  
}
```

```
public static double calculateFinalPrice(double price, double taxRate) {  
    return price + ((price * taxRate) / 100);  
}  
}  
  
class Main {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
        int intPrice = scanner.nextInt();  
        int intTaxRate = scanner.nextInt();  
        double doublePrice = scanner.nextDouble();  
        double doubleTaxRate = scanner.nextDouble();  
  
        int finalPriceInt = SalesTaxCalculator.calculateFinalPrice(intPrice,  
intTaxRate);  
        double finalPriceDouble =  
SalesTaxCalculator.calculateFinalPrice(doublePrice, doubleTaxRate);  
  
        System.out.println(finalPriceInt);  
        System.out.format("%.2f", finalPriceDouble);  
    }  
}
```

1. Problem Statement

Mr.Kapoor wants to create a program to calculate the volume of a Cuboid and a Cube using method overriding.

Implements a base class Cuboid with attributes for length, width, and height. Include a method calculateVolume() that computes the volume of the cuboid.

Extends the base class with a subclass Cube representing a cube, where all sides are equal. Override the calculateVolume() method in the Cube class to compute the volume of the cube.

The program should take user input for the dimensions of the cuboid and the side length of the cube and display the calculated volumes with two decimal places.

Input Format

The first line of input consists of 3 space-separated double values, representing the cuboid length, width, and height, respectively.

The second line consists of a double value, representing the side length of the cube.

Output Format

The first line of output prints the volume of the cuboid, rounded off to two decimal places.

The second line prints the volume of the cube, rounded off to two decimal places.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 60.0 60.0 60.0
50.0

Output: Volume of Cuboid: 216000.00
Volume of Cube: 125000.00

Answer

```
import java.util.Scanner;  
  
class Cuboid {  
    protected double length;  
    protected double width;  
    protected double height;  
  
    public Cuboid(double length, double width, double height) {  
        this.length = length;  
        this.width = width;  
        this.height = height;  
    }  
  
    public double calculateVolume() {  
        return length * width * height;  
    }  
}
```

```

    }

}

class Cube extends Cuboid {
    private double side;

    public Cube(double side) {
        super(side, side, side);      this.side = side;
    }

    @Override
    public double calculateVolume() {
        return side * side * side;
    }
}

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        double cuboidLength = scanner.nextDouble();
        double cuboidWidth = scanner.nextDouble();
        double cuboidHeight = scanner.nextDouble();

        // Regular object instantiation for Cuboid
        Cuboid cuboid = new Cuboid(cuboidLength, cuboidWidth, cuboidHeight);
        System.out.printf("Volume of Cuboid: %.2f\n", cuboid.calculateVolume());

        double cubeSide = scanner.nextDouble();

        // Upcasting - Using superclass reference for subclass object (DMD)
        Cuboid cube = new Cube(cubeSide); // Upcasting
        System.out.printf("Volume of Cube: %.2f", cube.calculateVolume()); // Calls
        Cube's method dynamically

        scanner.close();
    }
}

```
